

I am urging you, the FCC, to please reject the NAB's petition 04-160. Within your hands you have the power to help change America's broadcasting future. I have benefited from using XM Satellite Radio and its traffic and weather channels. I would like to enhance technology in America instead of inhibit it from growing. There are so many advantages of using XM Satellite radio, so much better reception than what I can get around here. And the variety is so much better. I travel very very frequently and find it EXTREMELY helpful to know what the weather and traffic is going to be like in approaching cities...if XM doesn't deliver this constantly then it would be up to radio DJs to remember that they should constantly be giving this information for people the not only need to hear it but want to. Thank you for your consideration and protecting my amendment rights. Stephanie Koster
